

**RERC-ACT T6 Project:
Technology Forum**

The Technology Forum promotes constructive communication among mainstream technology leaders, developers of cognitive assistive technology, people with cognitive disabilities, and people concerned with policy development for assistive technology. The Forum maintains a knowledge base about strategic technology trends and opportunities for cooperation and standardization in which issues are described and tracked. Users of the on-line website can post comments, add to the information available and propose new issues and opportunities for inclusion. In addition, the Technology Forum promotes direct communication in workshop format. Forum sessions will be added to annual meetings such as the Coleman Annual Conference, and the national conferences such as the Assistive Technology Industry Association (ATIA).
