

## **Web accessibility for people with cognitive disabilities**

**Presenters:** Clayton Lewis and James Sullivan, University of Colorado

**Abstract:** Content on the world wide web must be accessible and usable to people with cognitive disabilities who have a need or interest in it. Industry, educational, and government initiatives have been established to ensure accessibility of web information to people with cognitive disabilities. This poster will summarize key strategic goals identified by twenty workshop participants from public, private, government and educational institutions to ensure that information on the world wide web will be accessible and usable by people with intellectual disabilities.
